ESCAPAD

Survey on Health and Use on National Defence and Citizenship Day

Originally conducted on an annual basis from 2000 to 2003, the ESCAPAD survey has been organised on a triennial basis since 2005. It takes place on the National Defence and Citizenship Day (JDC), which has existed since obligatory military service was eliminated in France. Young people participating in a JDC session fill out an anonymous, self-administered questionnaire about their use of legal or illegal psychoactive substances and their health and lifestyle.

From 17 to 21 March 2014, the eighth ESCAPAD survey was conducted, with 26,351 French adolescents questioned about their health and their use of psychoactive substances. These mainly 17-year-old French nationals were still in higher education or in training, for the most part. The participation rate (non-blank questionnaires/young people present) was 99.3%.
